Warnings

General

- Do not use any sharp tools to open the packaging.
- We strongly advise against using power tools.
- Tripping hazard, mind your step.
- Do not put out cigarettes on the table.
- Not graffiti proof.
- Do not leave children unattended whilst playing on the table.
- To avoid danger of suffocation, keep plastic bags away from babies and children.
- Colors can differ over years and from batch to batch.

Wood

- When delivered, the wood is untreated.
- Wood is a natural material and its look is different for every slat, plank and tree.
- Wood will gradually become rougher and start to turn grey as a consequence of exposure to the sun and rain. We recommend oiling the wood once or twice a year. 1x before the Summer and 1x after the Summer as protection for the Winter.
- Cleaning regularly with mild detergent. Never use a high pressure cleaner as this will roughen the wood's smooth surface and irreparably damage the wood's fibress.
- Thorough cleaning with Extremis Wood Cleaner.
- We strongly recommend that you treat your wood with wood oil to protect it from stains - Small cracks and crevices can also appear as part of this process. We strongly advise everyone to treat the furniture with our Wood Protector. It is best to repeat this treatment each year.

Galvanized steel

- Galvanization will become less shiny when used outdoors.

- Flame retarding - NEN-EN13501-1 A1 - Class A1 products will not contribute to fire in any stage, including fully developed fire. For this reason, they are assumed to be capable of satisfying all requirements of all lower classes as well.
- Possible impurities in the immersion tank can cause black marks during galvanization, which are intrinsic to this industrial finishing technique.
- White marks on this zinc layer are also intrinsic to this procedure and will disappear when the furniture is put outdoors.
- This industrial finishing technique may result in a rougher surface. This is intrinsic to the process.

Assembly text instructions

Take a look at the drawings, starting from page 6

Coffee & corner square table (p6)

1. Put the tabletop upside down on a soft surface with the frame facing upwards.
2. Attach the four feet to each corner of the frame with an M10x20 bolt.
Tighten all bolts!

Wood

OILING

Twice a year

Before first use and/or after cleaning and sanding, we strongly recommend treating the wood with Extremis Wood Protector to protect it from dirt, moisture and UV rays.

DAY TO DAY CLEANING

Regularly and after every use

Schedule regular maintenance to prolong the life of your garden furniture. Regular maintenance ensures that the furniture always looks its best.

Cleaning the wood regularly and immediately after use with a clean, damp cloth ensures that liquids cannot penetrate deep into the wood. A well oiled table is less likely to absorb liquids and thus stays cleaner for longer. To remove stubborn dirt, simply use a hard brush and some water. Be careful not to cause permanent damage to the fibres. For this reason, you should never, ever use a high-pressure washer for cleaning wood.

THOROUGH CLEANING

Twice a year

It is essential to clean the wood thoroughly twice a year. We recommend

doing this just before spring and after summer if your furniture is outside all the year round. Pick one of those humid, cloudy days, as it is better for the moisture level in the wood to dry out slowly after cleaning.

SANDING WOOD

Every 2 years

After a few years, your wood will show cracks and perhaps some distortion. This is perfectly normal as wood is a natural and living material. The great advantage of solid wood is that you can sand away the top layer to make the surface even and smooth again. You should do this every two years using a hand sanding machine. Choose a dry day. Finish off with a 120-grit sandpaper.

REPLACING A WOODEN PART

Hey! You don't need to be an engineer to understand our products. And you don't even need to be great at DIY to replace a part. Do make sure that you can't repair the damage simply by sanding the slat.

Galvanized steel

CLEANING

When dirty

Clean with lukewarm water and a brush.

REPAIRING DAMAGED PARTS WITH ZINC SPRAY

When damaged

Hot dip galvanization is the most durable way of protecting metal against rusting. If the zinc coating is damaged, the exposed metal can rust. This can easily be touched up with zinc paint that automatically has the same colour and is readily available in shops. Zinc spray forms a quick drying, self healing and flexible coating that helps stop corrosion.
